

Earn money from the sun!

A group of people, seen from behind, are standing in a field. In the background, there are several rows of solar panels mounted on a structure. The scene is outdoors with trees and a clear sky. The text is overlaid on the image.

Mission Statement:

CloudSolar is a digital platform that democratizes the ownership of solar PV panels so that every citizen has an opportunity to participate in the solar energy industry.

The Problem

When an average citizen attempts to embark on a solar project, they encounter many administrative, bureaucratic, developmental, engineering, financial and land or roof space related hurdles to overcome.

The Solution

Using our digital platform, we remove all barriers to entry to owning solar power.

Any citizen with a bank account and access to the internet can now participate in the solar energy industry.

Why Now?

Solar panels' prices have been decreasing year on year. CloudSolar is rapidly scaling its solar pool under the existing 20 year Feed-In-Tariff rate (How you get paid for the power we produce).

We have developed this innovative platform in order to afford the general public the ownership of their own solar facilities without the hassle.

Why Barbados?

Established legislation

Strong prices afforded by the energy offtaker

Need to save foreign exchange

Need for local ownership

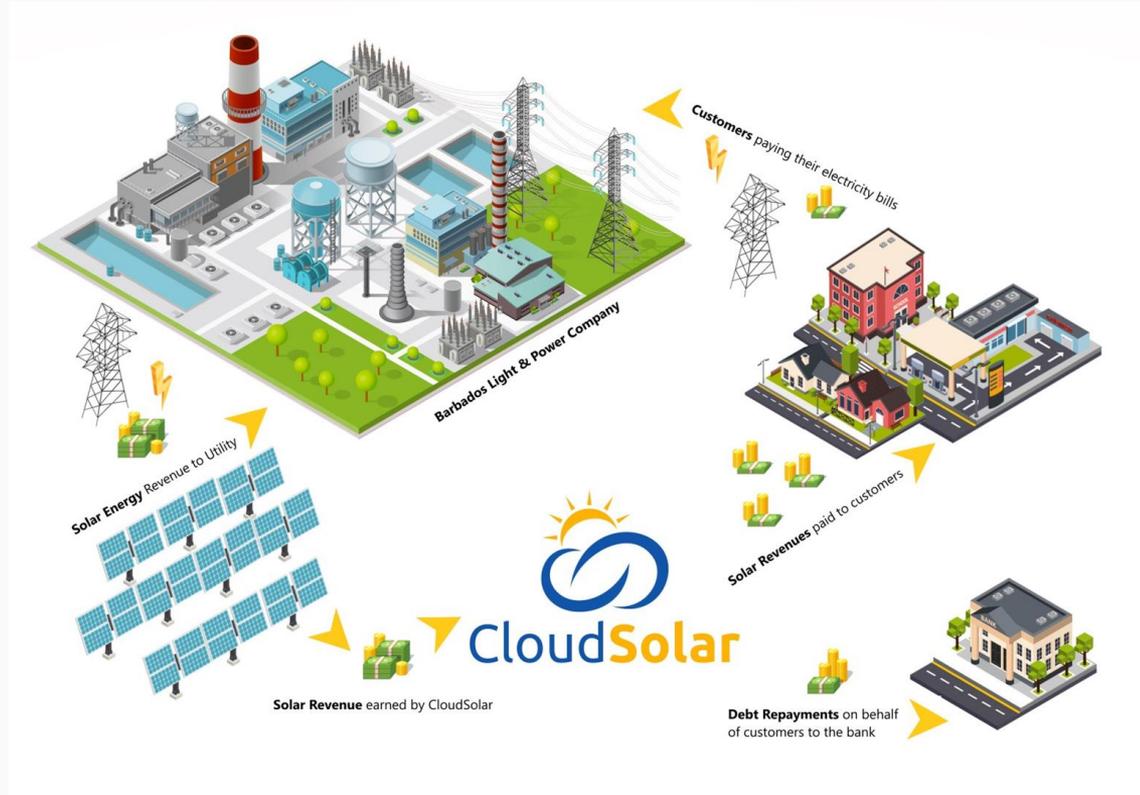

BARBADOS NATIONAL ENERGY POLICY

2019 – 2030 ◀

Our Business model

CloudSolar allows users to purchase panels directly from our cloud platform online – once installed and operating we transfer the economic benefits to the clients through the platform for a fee of 20% of the energy output.

How it works

Step 1

Select amount of solar panels from 1 to 20 panels

Step 2

Pay for solar panels with a one time price that includes, insurance, maintenance, and all expenses

Step 3

Earn money from the sun for 25 years! Solar credits are paid every month on the 21st day

Digital Solar Panels as an Investment

Purchase 1 to 20 panels in our remotely located solar pool and sit back and watch as the solar pool earns our client's their money from the sun!

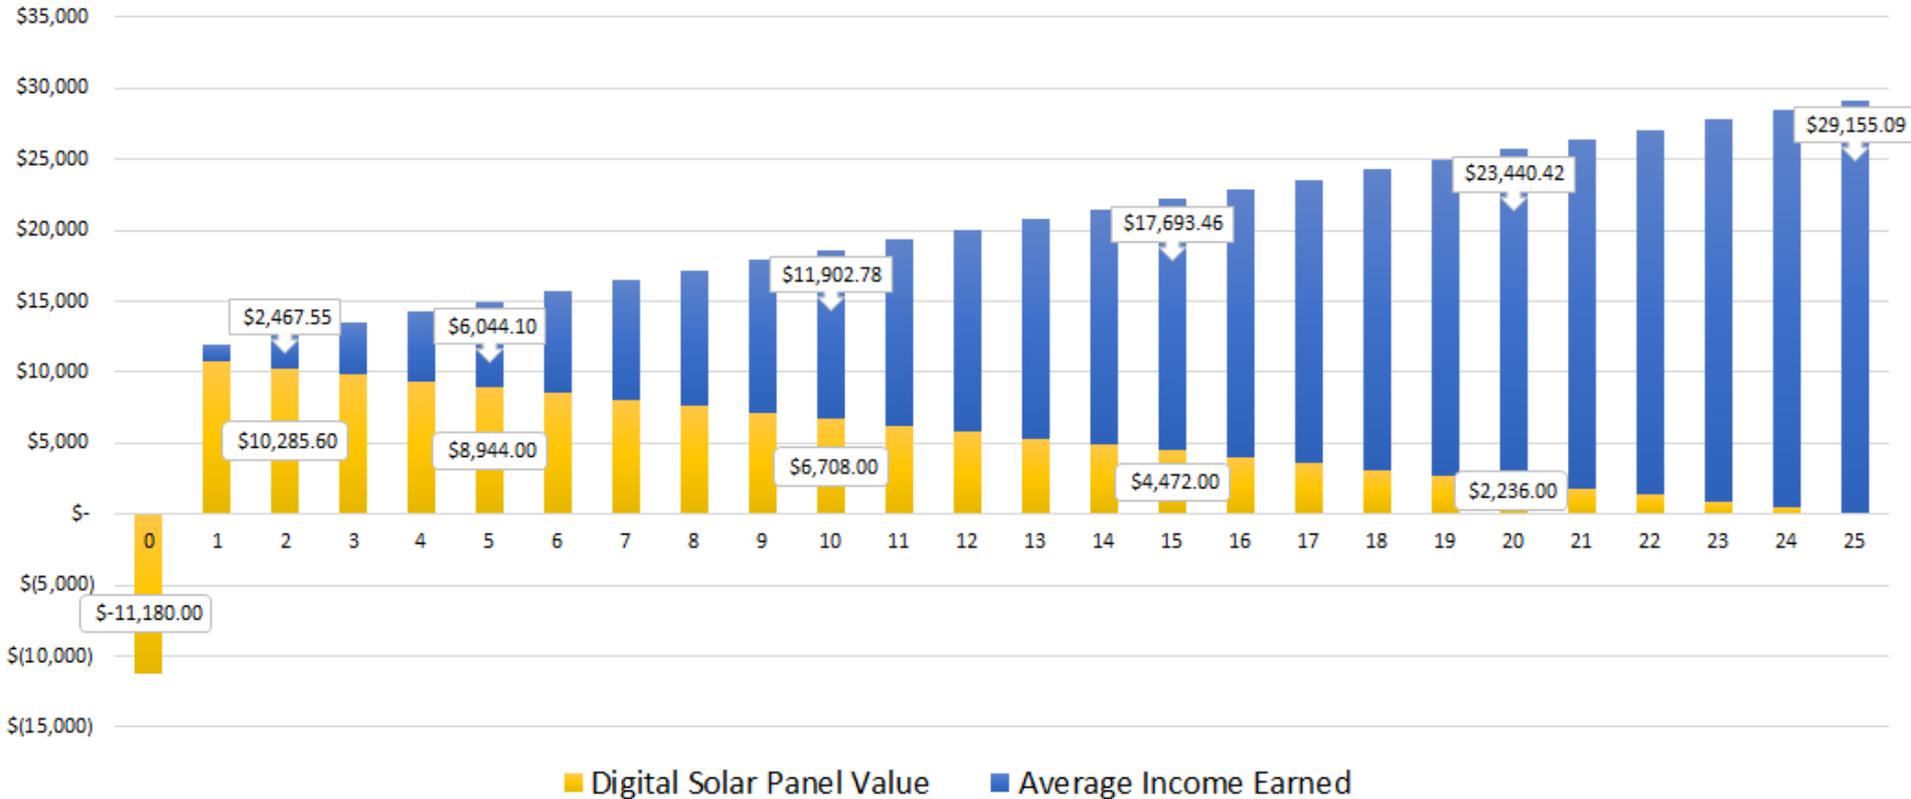

After 1 year, client's can opt to sell their panels back to the pool for a residual value on their investment in panels. Owners of panels receive the greatest return on their investment when they remain in the pool for 25 years.

Panels depreciate by 4% a year. Therefore the resale value to the pool of 1 solar panel after 5 years would be 80% of the value that was paid to buy the initial contract on those panels.

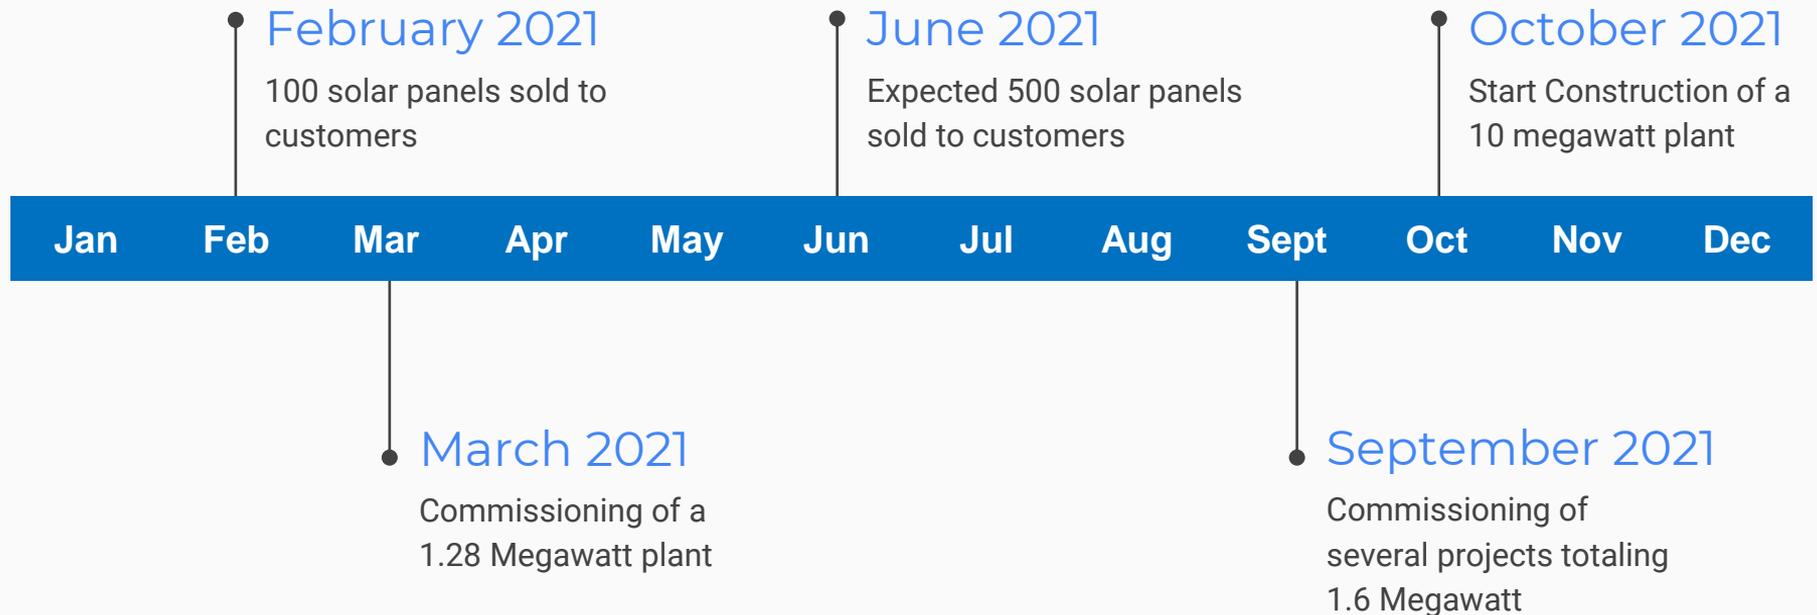

We protect all of our clients' assets with progressive insurance policies at each site through Grade A insurance companies. In the event of a disaster, the solar pool assets are covered and would be replaced or dissolved with owners being returned their capital.

Projected Income from 10 Digital Solar Panels

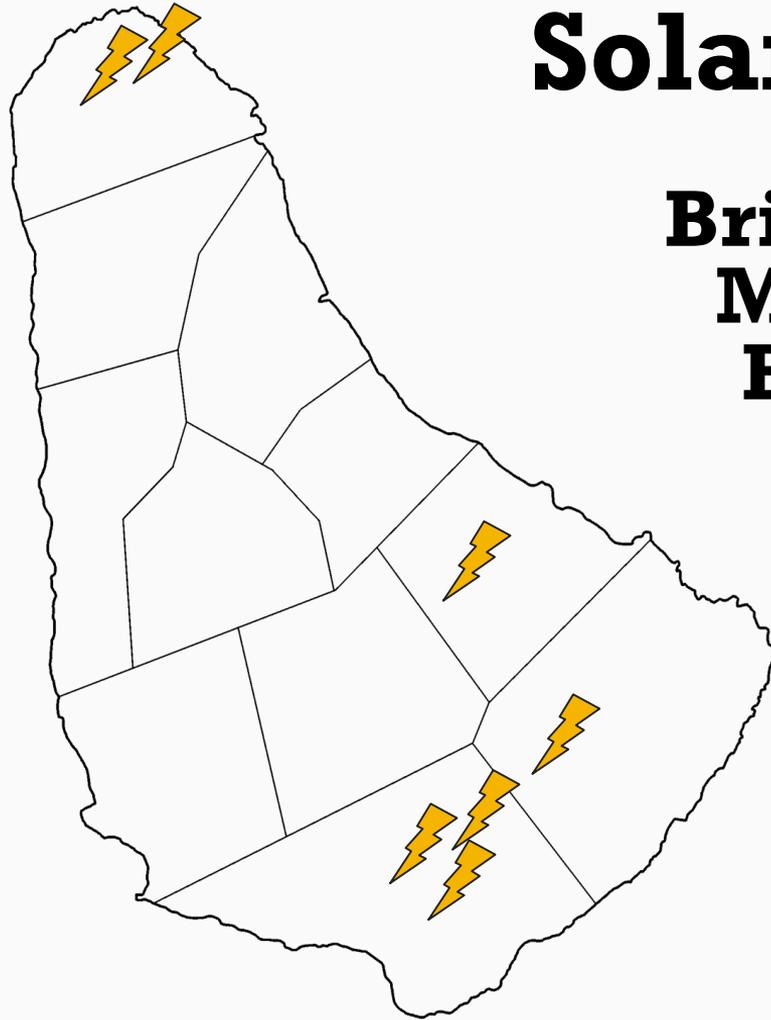

2021 Milestones

Completed goals and projected pipeline

The Solar Pool

CloudSolar owns and operates the solar pool. The pool aggregates the solar energy from all of the panels. This creates a large earnings pool which everyone shares in and benefits from. When there are repairs and maintenance or downtime that affects the pool, it only affects a small portion which limits the effects.

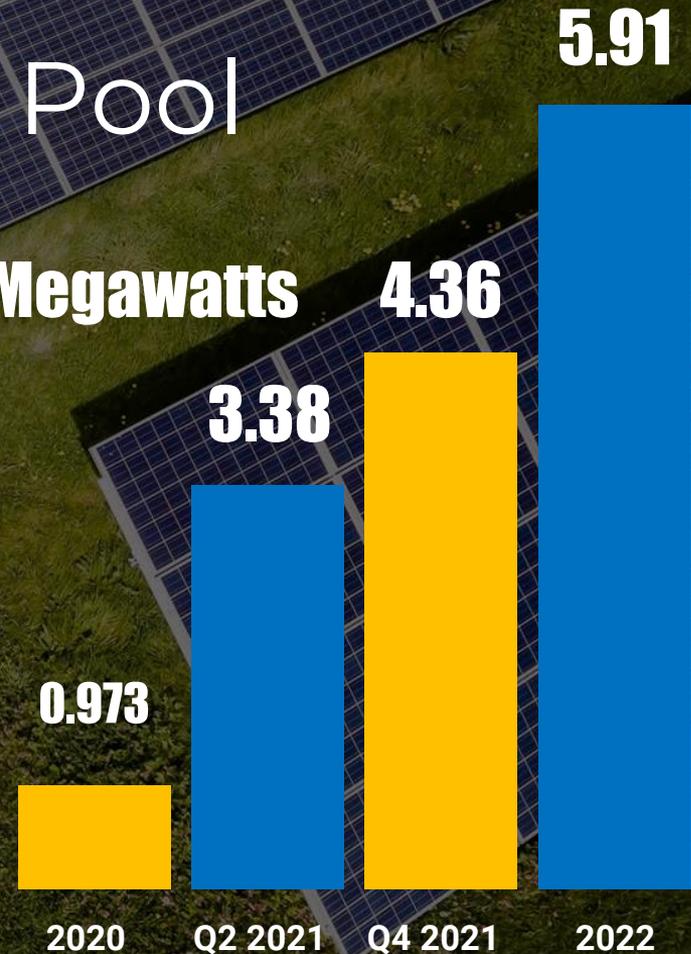

Solar Sites

Bright Hall
Monterey
Breeders
Guinea
Ridge
Balls
ZRS

Growth of the Solar Pool

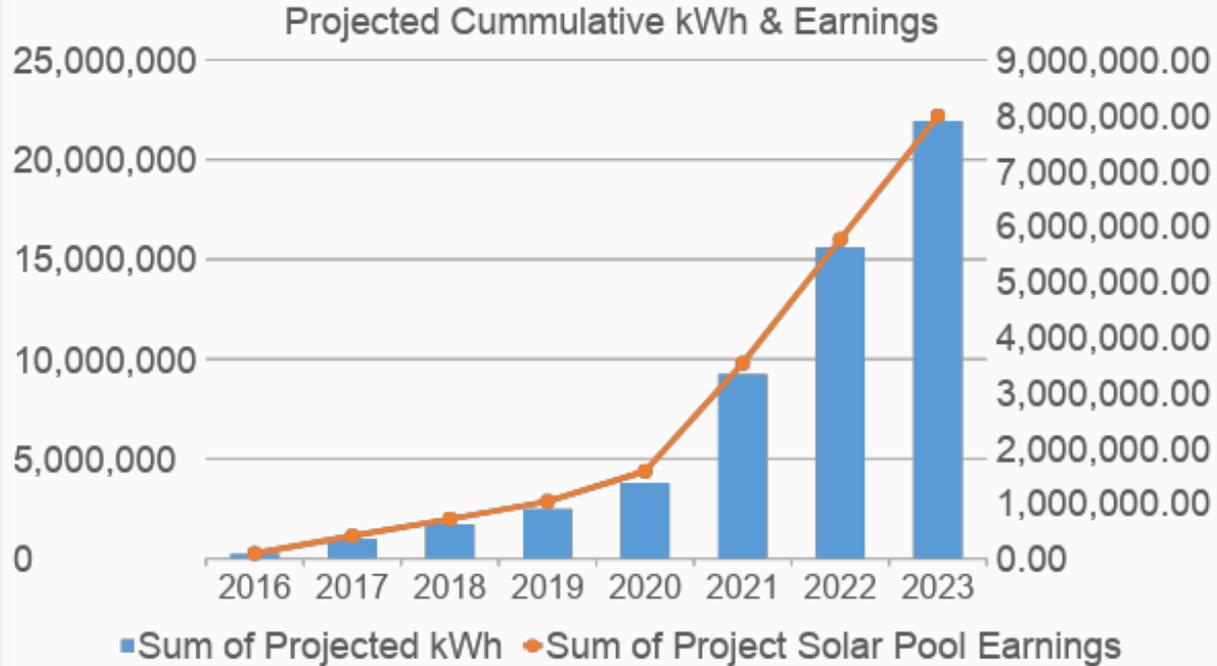

Our solar pool and panels installed are growing. We are rapidly funding the buildout of up to 6 megawatts of capacity that will be installed on the roofs of licensed buildings. The roofs we use are perfectly oriented south and with a pitch of 10 to 15 degrees. We also have 20 megawatts of ground mounted solar farms currently in the application process of the TCPO awaiting approvals.

Megawatts

Performance of the Solar Pool

The solar pool exports and sells all of its energy directly to the Barbados Light and Power. We manage the pool with an experienced team contracted through Emera, who provide the necessary services to guarantee the pool's success in returning solar credits to our customers.

So Many More Benefits

There are many benefits to being a part of a pool of solar. **CloudSolar** looks out for everyone's interest who purchases in the pool. We will purchase and install a system on a partner's roof.

Roof/Land License Required	✓	✗
All Operations & Maintenance Included	✓	✗
All Insurance Included	✓	✗
All Replacement Parts Included	✓	✗
Zero Downtime because of solar pooling	✓	✗
Your Best Costing and Value Installation	✓	✗
